

ABSTRACT OF THE DISCLOSURE

5 An information processing apparatus
connectable with an external printer, includes
communicating means for communication with the
external printer; notifying means for notifying the
external printer of pre-print notification through
the communicating means when execution of printing
is instructed; generating means for processing,
after the notifying means executes the notification,
10 data to be printed to generate print data; sending
means for the sending the print data generated by
the generating means to the external printer through
the communicating means.
